

# How to Factory Reset Your iPhone

## Remove Your Apple ID

First you will need to delete your Apple ID from the phone. A factory reset will not remove the Apple ID from the phone itself. To remove your Apple ID, follow these steps:

Go to

1. Settings
2. iCloud (either a link on its own, as in the below image, or under your name at the top of Settings menu)
3. Scroll to the bottom and choose "Delete Account"

## Factory Data Reset

Once you have removed your Apple ID, you can perform a factory data reset by following these steps:

Go to:

1. Settings
2. General
3. Scroll to the bottom and choose Reset
4. Choose Erase All Content and Settings
